PROFILE

eJPT-certified security practitioner pursuing opportunities in technical governance, risk and compliance (GRC), cyber risk, and security assurance. Practical project experience in Windows configuration assessment, Python and PowerShell tooling, structured evidence collection, and security reporting. Interested in connecting technical findings with business-risk decisions.

TECHNICAL SKILLS

Languages and scripting: Python, PowerShell, SQL

Platforms and tools: Windows, Linux, Git, GitHub, SQLite, Tkinter, PyInstaller

Security: Penetration-testing fundamentals, host and network assessment, web security fundamentals

Assessment and evidence: Configuration checks, structured JSON evidence, assessment scoring, HTML reports

PROJECT EXPERIENCE

SecureAudit | Python, PowerShell, SQLite, Tkinter, PyInstaller

Windows technical configuration assessment tool | github.com/shr3y11/SecureAudit

- Built a local Windows desktop workflow to select approved controls, run checks, collect structured evidence, and generate standalone HTML assessment reports.
- Implemented five baseline checks covering Windows Firewall, Microsoft Defender, BitLocker, the built-in Guest account, and SMBv1.
- Restricted PowerShell execution to an approved catalog with path validation, timeouts, JSON parsing, and check-ID validation.
- Separated Pass, Fail, and Error outcomes; calculated assessment score and coverage, and stored scan history in SQLite for review.
- Packaged the application with PyInstaller and validated the development build with 89 automated tests. Documented scope as a point-in-time technical assessment.

CERTIFICATIONS AND TRAINING

Junior Penetration Tester (eJPT) - INE Security | May 2026

Hands-on certification in assessment methodology, host and network auditing, and penetration testing.
Valid through May 2029 | ID: 181937915 | Verify credential

Web Fundamentals Learning Path - TryHackMe | August 2025

Completed 21 hours 20 minutes of coursework. | Credential: THM-AS5R8PKVHB

Pre Security Learning Path - TryHackMe | July 2025

Completed 7 hours 38 minutes of coursework. | Credential: THM-ZLASOIP0HW

RESEARCH INTERESTS

Risk-based control prioritization; relationships between NIST CSF, ISO/IEC 27001, and CIS Controls; cloud governance; enterprise AI risk and third-party cyber risk.
